

Tree and Shrub Fertilization

Fertilization is the most beneficial service you can provide to your trees and shrubs. Healthy plants can fight environmental changes, drought, insect attacks, disease, severe weather and stress.

Our fertilization program introduces nutrients into the soil surrounding the trees and shrubs and unlike some other methods, does not just promote quick greening, but rather stimulates root development. This in turn assists the trees and shrubs in producing new growth and increased vigor.

Fertilization is a vital part of tree and shrub maintenance. Healthy trees and shrubs will provide you with many years of beauty and enjoyment.
